ABSTRACTED-PUB-NO: NL 7215234A

BASIC-ABSTRACT:

An improved carpet made from a base gauze with a pile or plush surface on one side, has on the other, a resilient, securely bonded, foam backing comprising a mass of gas filled microspheres of synthetic resin embodied in a thermoplastic matrix. The foam is applied as a viscous dispersion in water of a film-forming synthetic resin and minute expandable balls of synthetic resin contg. a

volatile fluid expansion agent with various additives and is heated first to drive out the water and then raised to the higher temp. necessary to expand the tiny balls into gas filled cells of resin. The microspheres are pref. a copolymer of 60% styrene and 40% acrylonitrile and the matrix pref. styrene and butadiene copolymer.
